

Combination lock tutorial: James Reserve

Which lock and how to open it at the James?

To arrive at the James, you will note that there are two locked gates you will need to cross. Both gates have several locks on them, to allow access to you and to various service personnel. This tutorial is aimed at helping you identify which lock you will need to use to enter the gates.

The first gate is right off the main road (243), see photo to right. The locks are on a chain on the left side of the gate.

Of all the locks on the chain, there are only two that are combination locks, the rest are for keys.

Of these two you DON'T want the one that says UPS/FedEx . Look for the one

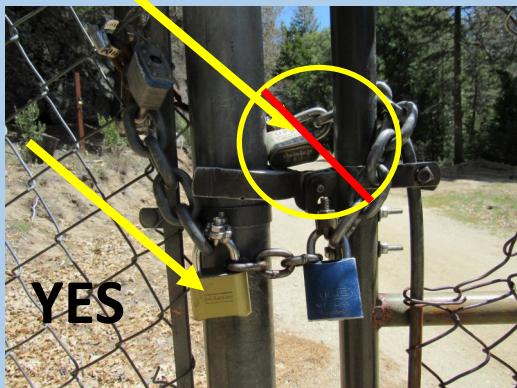

2395

Once you have this one, you will need to enter the code **2395** on the four tumblers of the lock. The lock should open, you might have to push it in first and then pull it open. When you go to close the lock you MUST scramble the numbers otherwise it will not close.

The second gate is at the Reserve property boundary. Again,

two combination locks, look for the one NOT marked UPS/FedEx. Repeat the instructions above and the lock should open.
